EYE SAFETY

Every day, around 2,000 people suffer eye injuries in the workplace. But did you know that 90% of those accidents could be prevented through the use of proper protective eyewear?

Don't become a statistic. Do your part by making sure you always wear the right kind of eye protection for the job you're performing and making sure that it fits properly. Safety glasses should rest firmly on top of the nose and close to, but not against, the face.

If your safety eyewear is uncomfortable, foggy or sight-restrictive, it's time to find a new pair. Experiment with different types—there are many styles and sizes available.

Take a moment to determine eye hazards in your workplace so you can take the proper precautions to prevent injury.
